

„F” type multimedia subscriber outlets

GMF-35x

RoHS

The **GMF** series multimedia subscriber outlets are designed for group CATV installations, where return path is used for data transmission services like Internet or VoIP telephony. Depending on the type of the outlet, the sum of transmitted signals can be divided into suitable outputs:

- R (FM radio receiver),
- TV (TV receiver),
- D – DATA (cable modem).

The construction of outlet casing allows its installation in the OGF type plastic casing (“mouse”). Thanks to that this outlet can be used in CATV installations as the end subscriber.

GMF outlets are designed for in-door use.

- Full range of work frequencies: 5-862MHz .
- Separation of signals to dedicated outputs:
R/TV/DATA
- Same attenuation of signal loss in both transmission ways in DATA path – 10,5 dB.
- Efficient blockade of interference from output side in direction of the return path >30 dB.
- Solid, die-cast housing
- Simple installation and sure connection of the outlet
